

LUMNIA® MINI

A discreet unit that fits almost anywhere.

Fly control is essential to your business, even in customer-facing areas. But that doesn't mean fly control should be obvious to your customers.

Lumnia® Mini is our smallest and most discreet insect light trap (ILT) for businesses that require fly control in public spaces like restaurants, bars, cafes, and lobbies. Its low-profile design and versatile mounting options make it easy to hide in plain view or tuck away out of sight.

Why LED?

As the smallest unit in the Lumnia® range, Lumnia® Mini is perfectly suited for desktop or front-of-house settings. Engineered to catch more flies while lowering your power consumption, Lumnia® Mini uses a 6W LED bulb to provide up to 80% energy savings when compared to equivalent units on the market.¹

When hygiene is a top priority.

For many businesses, health, safety, and sanitation are of primary concern. All Lumnia® units are designed to be exceptionally hygienic, capturing and covering insects to prevent fragmentation, which is common with earlier-generation ILTs.

Versatile design to blend into your space.

The discreet design of Lumnia® Mini allows it to easily blend into almost any space. It can even be mounted behind counters or under bars for maximum discretion. With two colors available, you can choose the one that best suits your interior.

UP TO 80% ENERGY SAVINGS

compared to similar fluorescent bulb devices¹

4-YEAR LAMP LIFE

33% longer-lasting than available direct competitor units²

ADJUSTABLE ENERGY MODES

to help reduce energy usage and operating costs

LAMPS CONTAIN ZERO MERCURY

to minimize concerns of damage to the environment or human health
